RANDOM TEXTER v2.2 Author: $Ax + By = C$

Overview: Create wordlists of random characters from text files in the program's directory. For example, type "lotto" at the first prompt to make sets of lottery numbers from the text file 'lotto'. To generate passwords type "pass" at the first prompt and uncheck the delimiter check box, you can always change the characters used by editing the text file being read from.

Usage: Extract the contents of the archive into a new folder on your hard drive. You can then run the RANDOM TEXTER binary by executing the file named random.exe. Press "OK" to create a new text file, if you wish to stop the loop press "CANCEL."
